General Motors Position Statement on the Definition of Genuine GM Parts

General Motors Australia & New Zealand are serious about the safety of our customers and their right to have Genuine GM Parts fitted to their vehicles.

There are many parts on sale in Australia that may fit a Cadillac, Chevrolet, GMC, Holden & Corvette (all of which are General Motors vehicle brands); but only those sold through the GM Australia & New Zealand authorised supply chain can be trusted to be Genuine GM parts.

GM Australia & New Zealand would like to clarify to the market & industry what a Genuine GM Part is.

A Genuine GM part is as follows:

"Genuine GM Parts are parts that are designed, validated and engineered by General Motors or its associated entities; sourced through the GM Australia & New Zealand authorised supply chain that are subject to warranties given by GM Australia & New Zealand.

Genuine GM Parts are the replacement parts approved by General Motors for General Motors produced vehicles, including Chevrolet, Holden & Corvette."

Consumers & Repairers should be wary of using parts sourced from non-authorised outlets.

General Motors Australia & New Zealand continue working alongside other OEMs as part of the Federal Chamber of Automotive Industries' initiatives, to promote the importance and use of genuine parts.
